

## Sustainability Policy

Horticultural Creations, Inc. is fully committed to a greener and more sustainable environment both internally and externally with our Clientele.

All of our offices and warehouses have efficient lighting and self-contained watering machines to avoid leaks, waste, and run-off. Recycling is done throughout our premises as a conservation effort. We also recycle with our Vendors in many ways, such as reusing worn out Birch branches by wrapping them with LED Lighting and using them in our Holiday displays. This eliminates having to buy new products overseas.

Externally, we assist Corporations, Building Owners, and Management teams in their Leed Certifications. We construct green roofs, green walls, living walls, and preserved walls where lighting and water restrictions exist.

In addition, we supply plants that generate the most oxygen for interior offices to help enhance their health benefits. We use smart irrigation controls to conserve water use for our Clients. We review and analyze our policies every year. We communicate our policies with our employees and vendors and look forward to their commitment and improved performance.

As a company, we have a goal to make our spaces greener and more sustainable!
